

Announcement of 2022 Face-to-Face IEC CIM 61970 Part 13 (formerly 61968-13) IOP

The Grid Model Data Management (GMDM) IOP Event is a multi-vendor interoperability event that will be testing and demonstrating the exchange of distribution grid model data using the Common Information Model (CIM) standards. This Face-to-Face CIM IOP test is being hosted by EPRI and managed and validated by the UCAIug CIM Testing Committee. The relevant information is:

Dates: June 14-16, 2022 (setup June 14, July 15-16th the actual IOP)

Location: EPRI: Charlotte, NC

Testing of Tools and Data Exchanges for GIS, DMS, Planning, Substation Design and Assets will be demonstrated.

Call to Action

Now is the time to become involved if you wish to participate in this test as either a participant or a witness and to register on the CIM IOP page using the link below.

If you are a utility or consultant, this is the time to bring your expertise to the IOP and provide a much needed witness for these test cases we will be executing for this IOP. The IOPs represent a low cost method to have the ability to see the Vendor tools and software that will implement the standard under test. Obviously, having the vendors you are intending to utilize participate in the IOP adds further value.

If you are a vendor, participation offers a collaborative environment to improve the quality of your implementation(s).

If you are interested in participating, witnessing, or have question please feel free to contact me at: margaret@ucaiug.com or register at <https://cimug.ucaiug.org/CIM-IOP-2022/SitePages/Home.aspx>

A copy of this announcement can be found at www.ucaiug.org under Press Releases (<http://www.ucaiug.org/Press%20Releases/Forms/AllItems.aspx>).
